

Sport Concussion Management Policy

Happy Valley Football Club

Date: 31-01-2023

Concussion is a disturbance in brain function caused by direct or indirect force to the head, face, neck or elsewhere with the force transmitted to the head. When it occurs a player may experience symptoms and temporary loss of some brain skills such as memory and thinking abilities. A player does not have to be knocked out to have a concussion. It is important for all stakeholders (parents, players, coaches, sports trainers, medical team, etc.) to be aware of signs and symptoms of concussion which are often subtle.

The priority remains the short- and long-term welfare of the player. These guidelines are to be adhered to at all times.

The AFL Doctors' Association, have issued new guidelines to manage concussive episodes sustained during activities.

This policy is based on those guidelines and is shown below:

Management of Concussion

The following 3 steps will be implemented in the initial management of concussion within our club:

1. Recognising a suspected concussion

The sports medicine, sports trainer or first aid personnel present will assess a player suffering a suspected concussive episode at trainings and during games.

The 'Concussion Recognition Tool 5' (CRT5) will be used to assess for the signs and symptoms of a suspected concussion. Our club personnel will be educated in the use of the CRT5 Tool and attend regular updates on concussion management.

2. Removing the player from the game

If the player presents with any signs and symptoms of concussion as indicated by the CRT5 that player is removed from training or game and not allowed to continue playing or training that day.

If in doubt then the player will be removed from training or games until reviewed by a doctor.

3. Referring the player to a medical doctor for assessment

All players with concussion or suspected concussion need an urgent medical assessment (with a registered medical doctor).

The player shall not be allowed to resume training or playing again until a written clearance from a doctor has been received by the Club's sports medicine / first aid personnel. The doctor is required to clear the player utilising the SCAT 5 or Child SCAT 5 Assessment Tool.

If no concussion is determined by the doctor, then the player can return to training and play.

If a concussion is determined by the doctor to have been present, then the player shall undertake a graduated return to play concussion rehabilitation program.

Return to Play

The Return to Play/Sport program will either be prescribed by the Club's senior sports medicine / sports trainers staff. The program will follow a stepwise, medically managed exercise progression with increasing amounts of exercise.

Players are expected to report to the medical trainer on duty **BEFORE** commencing any graded activity as part of their return to play program! All sessions must be fully witnessed and signed off by a qualified Club Sports Trainer before the player can progress to the next session.

The Club's sports medicine / sports trainer staff will follow the **Management of Sport-Related Concussion in Australian Football – Phases of Return to Play Following Concussion.**

It will consist of a series of 4 activities with a rest/recovery day in between each session, supervised by the Club's sports medicine / sports trainers staff. To move on to the next activity the player must be asymptomatic after each session. The 4 activities are:

- a. Daily activities that do not provoke symptoms, including returning to school or work
- b. Light aerobic activity (e.g. walking, swimming or stationary cycling)
- c. Light, non-contact training drills (e.g. running, ball work)
- d. Non-contact training drills (i.e. progression to more complex training drills, may start light resistance training. Resistance training should only be added in the later stages).

Following these 4 training activities the player must then obtain a medical clearance before commencing full contact training. If asymptomatic 24 hours after the final full contact training session, they are eligible to return to play/sport.

This new policy is effective from the date of this memo.

**Happy Valley Football Club
Head Trainer**

The following people at our club have been advised of the policy at the start of each season:

- Coaches
- Sports Medicine Personnel including sports trainers and first aiders
- Team Managers
- Players
- Parents / Caregivers

Attachments to be included with this Policy:

1. The Management of Sport-Related Concussion in Australian Football
2. Concussion Recognition Tool 5
3. HVFC Head Injury Form
4. AFL Return to Play Following Concussion Checklist for sport medicine / sport trainer staff
